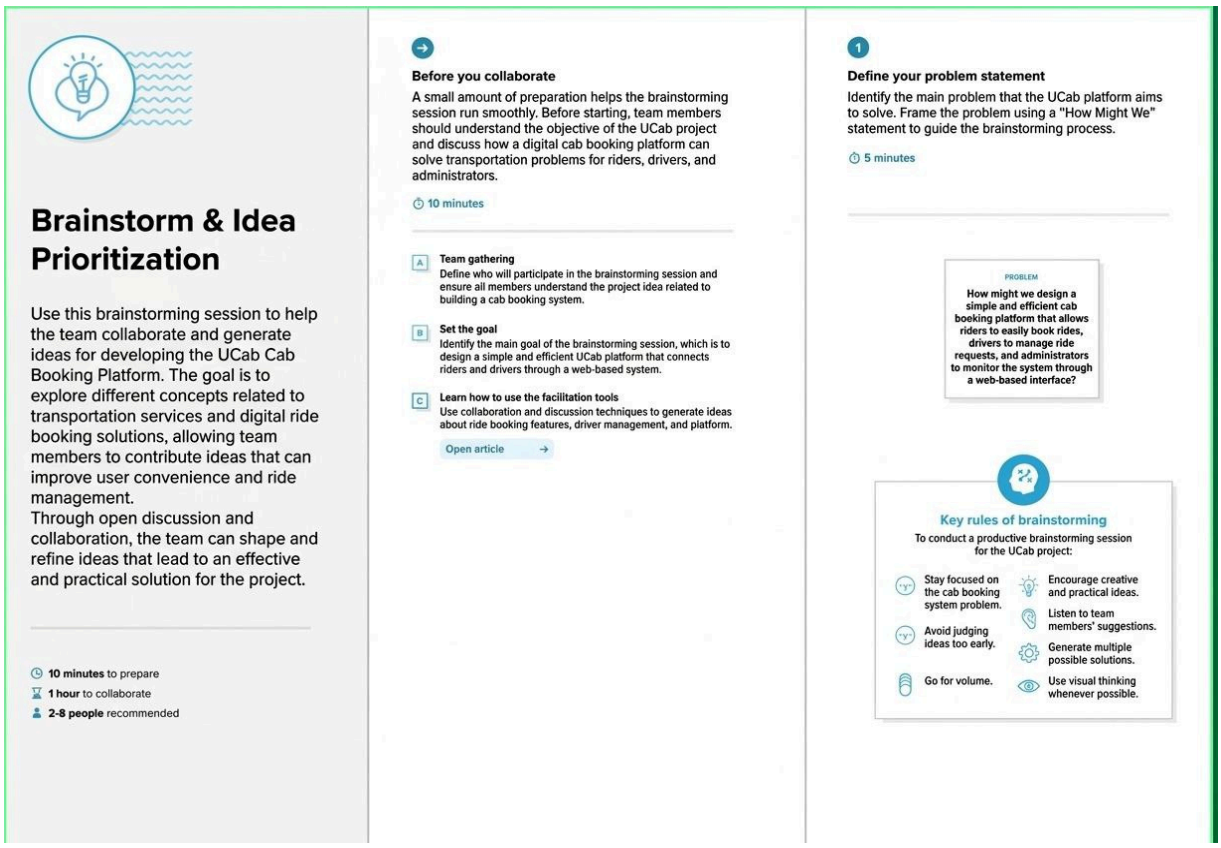
**Brainstorm & Idea Prioritization:**

Brainstorming and idea generation play an important role in identifying practical solutions to real-world problems. During this phase, team members collaborate and openly share their thoughts to explore multiple ideas before selecting the most suitable concept for development. The goal is to encourage creative thinking, allow different perspectives, and build upon each other's suggestions to reach an effective solution. Through discussion and evaluation, the team identifies feasible ideas that can be implemented using available technologies and resources. This process helps in shaping a clear project direction and ensures that the selected idea addresses a meaningful problem. In this project, brainstorming helped the team finalize the concept of UCab, a web-based cab booking platform that demonstrates how riders, drivers, and administrators interact within a structured ride-booking system.

**Step-1: Team Gathering, Collaboration and Select the Problem Statement**



## Brainstorm & Idea Prioritization

Use this brainstorming session to help the team collaborate and generate ideas for developing the UCab Cab Booking Platform. The goal is to explore different concepts related to transportation services and digital ride booking solutions, allowing team members to contribute ideas that can improve user convenience and ride management.
Through open discussion and collaboration, the team can shape and refine ideas that lead to an effective and practical solution for the project.

**10 minutes** to prepare
**1 hour** to collaborate
**2-8 people** recommended

**Before you collaborate**
A small amount of preparation helps the brainstorming session run smoothly. Before starting, team members should understand the objective of the UCab project and discuss how a digital cab booking platform can solve transportation problems for riders, drivers, and administrators.

10 minutes

A **Team gathering**
Define who will particlpate in the brainstorming session and ensure all members understand the project idea related to building a cab booking system.

B **Set the goal**
Identify the main goal of the brainstorming session, which is to design a simple and efficient UCab platform that connects riders and drivers through a web-based system.

C **Learn how to use the facilitation tools**
Use collaboration and discussion techniques to generate ideas about ride booking features, driver management, and platform.

1 **Define your problem statement**
Identify the main problem that the UCab platform aims to solve. Frame the problem using a "How Might We" statement to guide the brainstorming process.

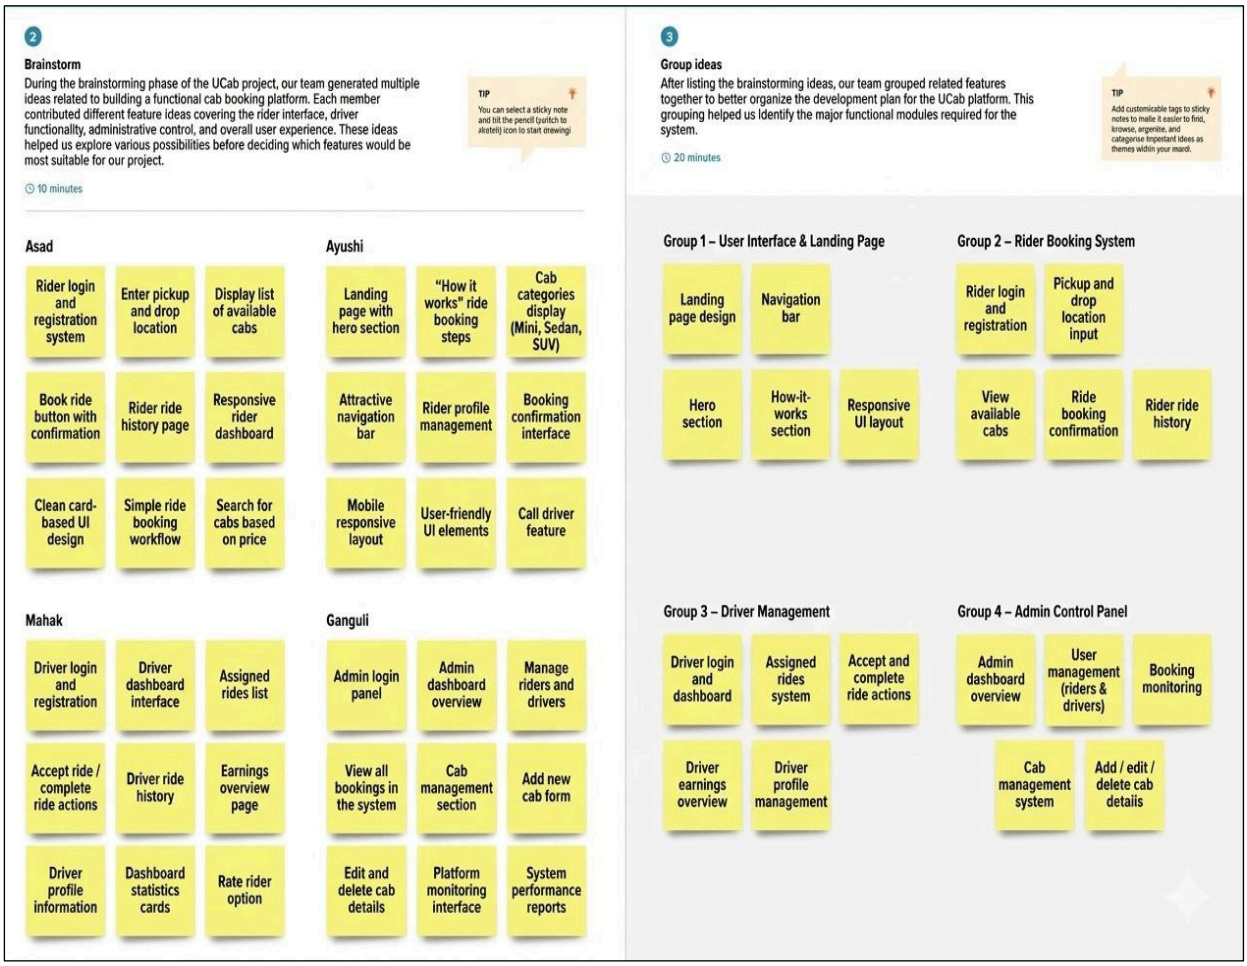
5 minutes

PROBLEM
How might we design a simple and efficient cab boeking platform that allows riders to easily book rides, drivers to manage ride requests, and administrators to monitor the system through a web-based interface?

**Key rules of brainstorming**
To conduct a productive brainstorming session for the UCab project:

- Stay focused on the cab booking system problem.
- Avoid judging ideas too early.
- Go for volume.
- Encourage creative and practical ideas.
- Listen to team members' suggestions.
- Generate multiple possible solutions.
- Use visual thinking whenever possible.

## Step-2: Brainstorm, Idea Listing and Grouping



## Step-3: Idea Prioritization

4

**Prioritize**

During the brainstorming phase of the UCab project, our team evaluated all proposed features and organized them based on their importance to the ride-booking system and their feasibility within the project scope. This prioritization helped us determine which features should be implemented first to demonstrate a functional cab booking platform.
