Customer Problem Statement :

Many people face difficulties when trying to find reliable and convenient transportation quickly. Traditional methods of booking taxis or cabs can be time-consuming and often lack clear information about ride availability and booking confirmation. From a customer's perspective, there is a need for a simple system that allows users to easily search for available rides, book a cab, and manage their travel details in one place.

The UCab platform aims to address this problem by providing a structured digital system where riders can book rides easily, drivers can manage ride requests, and administrators can monitor bookings and system activities. By creating such a platform, the goal is to improve convenience, efficiency, and overall ride-booking experience for users.

Customer Problem Statements – UCab Platform

Riders, drivers, and administrators face challenges with transportation services. Here are their key problem statements.

I am	I'm trying to	but	because	which makes me feel
	book a cab quickly to travel within the city	I cannot easily find available drivers or confirm rides instantly	there is no simple platform showing real-time ride availability and booking confirmation	frustrated and uncertain about reaching my destination on time
	receive ride requests and manage trips efficiently	I don't have a simple system to track bookings and completed rides	traditional systems do not provide organized request management	stressed and less productive during work
	monitor bookings, bookings, users, and drivers on the platform	I lack a centralized system to manage and track all operations	data and ride activities are not organized in one place	concerned about system efficiency and management
	the UCab platform provide a smooth and reliable ride-booking experience	transportation services often lack coordination between riders, drivers, and management	many systems do not integrate booking, tracking, and management features together	challenged to ensure efficiency and user satisfaction

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a rider	book a cab quickly to travel within the city	I don't have a simple system to track bookings and completed rides	there is no simple platform showing real-time ride availability and booking confirmation	frustrated and uncertain about reaching my destination on time
PS-2	a driver	receive ride requests and manage trips efficiently	I don't have a simple system to track bookings and completed rides	traditional systems do not provide organized ride request management	stressed and less productive during work
PS-3	an administrator	monitor bookings, users, and drivers on the platform	I lack a centralized system to manage and track all operations	data and ride activities are not organized in one place	concerned about system efficiency and management
PS-4	the UCab platform team	provide a smooth and reliable ride-booking experience	transportation services often lack coordination between riders, drivers, and management	many systems do not integrate booking, tracking, and management features together	challenged to ensure efficiency and user satisfaction
