Empathy Map Canvas:

An empathy map is a simple visual tool that helps teams understand their users by capturing their thoughts, feelings, behaviors, and challenges. It allows a team to look at a problem from the user's perspective and better understand their needs, motivations, and frustrations.

For the UCab cab booking platform, the empathy map helps us understand how riders, drivers, and administrators interact with the system. By analyzing what users **say, think, feel, and do**, the team can identify the real challenges they face while booking rides, managing trips, or monitoring the platform. This process helps the team move beyond assumptions and focus on the actual experiences of users.

Creating an empathy map for the UCab project helps the team identify user goals, pain points, and expectations when using a ride-booking service. Riders may want quick and reliable transportation, drivers may want efficient ride management, and administrators may want better system control and monitoring. Understanding these perspectives helps the team design features that improve convenience, usability, and overall service experience.

Overall, the empathy map helps the UCab team gain deeper insight into user behavior and challenges, enabling the development of a more user-centered, efficient, and reliable cab booking platform.
