Project Design Phase-II
Data Flow Diagram & User Stories

Date	07 March 2026
Team ID	Team 295
Project Name	UCab – Cab Booking Platform
Maximum Mark	4 Marks

Data Flow Diagrams:

1. A **Data Flow Diagram (DFD)** for the **UCab Cab Booking Platform** represents how data moves between different users and system components. It shows how information is entered, processed, stored, and shared within the platform.

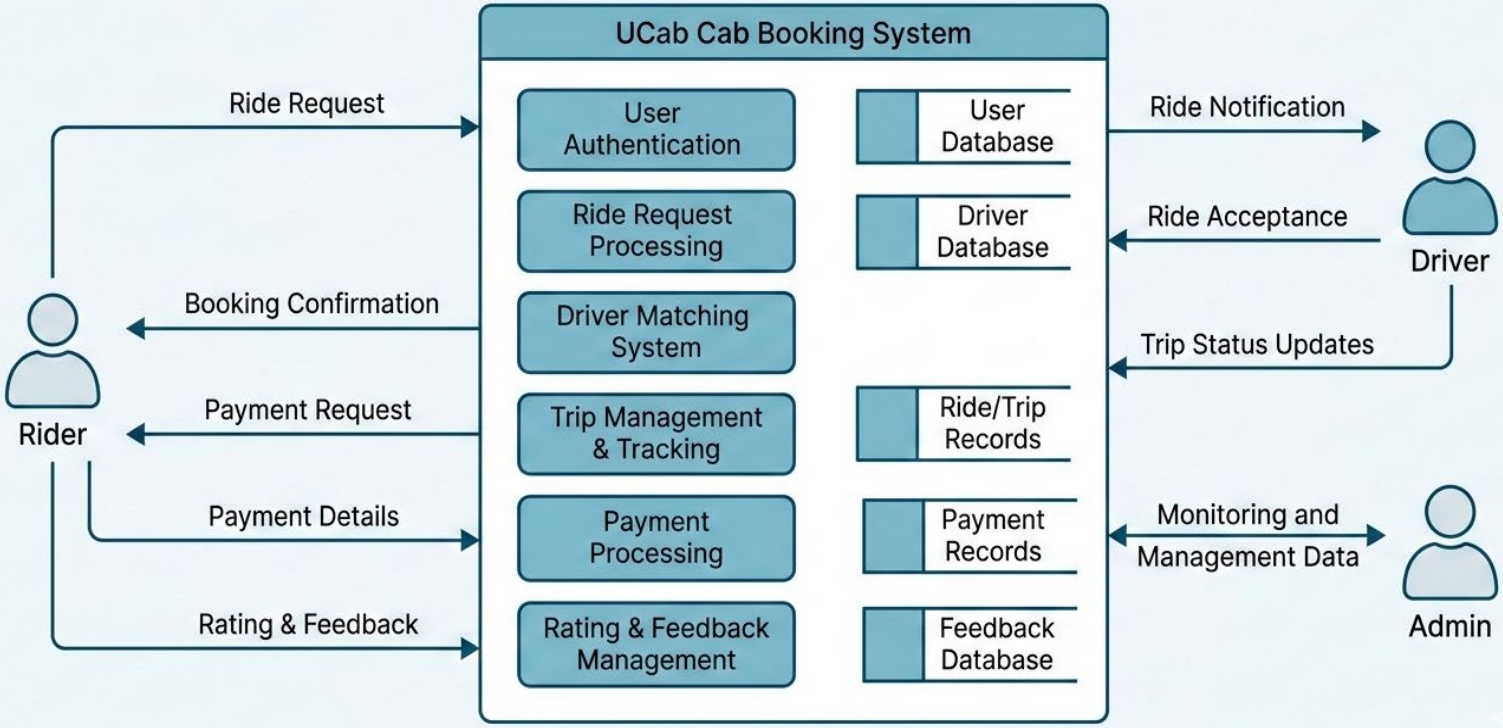
2. In the UCab system, the main **external entities** are **Rider, Driver, and Admin**. These users interact with the **UCab System**, which processes ride requests, driver assignments, trip tracking, payments, and feedback.

3. When a **Rider** opens the app and requests a ride, the request data (pickup location, destination, and ride details) is sent to the **UCab system**. The system processes this information and sends the ride request to available **Drivers**. A driver can **accept or reject** the request, and once accepted, the system confirms the booking to the rider.

4. During the ride, the system manages **trip tracking data**, driver location updates, and ride status. After the ride is completed, the system processes the **payment transaction** and stores the trip details in the database. The rider can then provide **ratings and feedback**, which are stored and monitored by the **Admin**.

5. The **Admin** interacts with the system to manage drivers, monitor rides, handle complaints, and review system reports. The DFD helps visualize how information flows between users and the UCab platform to ensure smooth ride booking and management.

Data Flow Diagram (DFD) – UCab Cab Booking Platform



User Stories

- **Riders want a simple and reliable cab booking platform where they can quickly request rides, track drivers, make secure payments, and provide feedback.**
- **Drivers want an efficient system to receive ride requests, manage trips, navigate to riders, and track their earnings.**
- **Administrators want a centralized system to manage users, monitor rides, handle payments, and ensure smooth platform operations.**

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Rider	Registration	USN-1	As a rider, I want to register with my basic details so that I can create an account.	Rider account created successfully.	High	Sprint-1
Rider	Login	USN-2	As a rider, I want to log in securely to access the platform.	User authenticated and redirected to dashboard.	High	Sprint-1
Rider	Ride Booking	USN-3	As a rider, I want to enter pickup and drop locations to book a cab.	Ride request submitted successfully.	High	Sprint-2
Rider	Ride Tracking	USN-4	As a rider, I want to track the driver location after booking.	Real-time driver location visible.	High	Sprint-2
Rider	Payment	USN-5	As a rider, I want to complete payment after the ride.	Payment processed and trip completed.	High	Sprint-3
Driver	Driver Registration	USN-6	As a driver, I want to register my profile and vehicle details.	Driver account created and stored in database	High	Sprint-1
Driver	Ride Requests	USN-7	As a driver, I want to receive and accept ride requests from riders.	Driver receives notifications and can accept rides.	High	Sprint-2
Driver	Trip Management	USN-8	As a driver, I want to start and complete trips through the app.	Trip status updated correctly in system.	High	Sprint-2
Admin	User Management	USN-9	As an admin, I want to manage rider and driver accounts.	Admin can view, update, or remove users.	Medium	Sprint-3
Admin	System Monitoring	USN-10	As an admin, I want to monitor ride activity and system data.	Admin dashboard displays ride and system data.	Medium	Sprint-3
