Project Design Phase
Solution Architecture

Date	07 March 2026
Team ID	Team 295
Project Name	UCab – Cab Booking Platform
Maximum Marks	4 Marks

Solution Architecture:

- The **UCab platform follows a layered architecture** where riders, drivers, and administrators interact with the system through web or mobile interfaces connected to a centralized backend server.
- The **frontend layer** provides dashboards and booking interfaces that allow riders to request rides, drivers to manage trip requests, and administrators to monitor platform activities.
- The **backend application layer** processes authentication, ride requests, driver matching, trip management, payments, and feedback handling through APIs.
- The **database layer** stores important system data such as user profiles, driver details, ride records, and payment transactions to ensure reliable data management and retrieval.
